

Coachmans Medical Practice

Quality Report

Lansbury Road
Broadfield
Crawley
West Sussex
RH11 9JA
Tel: 01293 583320
Website: www.coachmansmedicalpractice.co.uk

Date of inspection visit: 10 January 2018
Date of publication: This is auto-populated when the report is published

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Ratings

Overall rating for this service	Good	
Are services safe?	Good	
Are services effective?	Good	
Are services caring?	Good	
Are services responsive to people's needs?	Good	
Are services well-led?	Good

Background to Coachmans Medical Practice	5
Detailed findings	6

Overall summary

Letter from the Chief Inspector of General Practice

Coachmans Medical Practice is rated as good overall. (Previous inspection 25 March 2015 rated as good overall).

The key questions are rated as:

Are services safe? – Good

Are services effective? – Good

Are services caring? – Good

Are services responsive? – Good

Are services well-led? – Good

As part of our inspection process, we also look at the quality of care for specific population groups. The population groups are rated as:

Older People – Good

People with long-term conditions – Good

Families, children and young people – Good

Working age people (including those recently retired and students – Good

People whose circumstances may make them vulnerable – Good

People experiencing poor mental health (including people with dementia) - Good

We carried out an announced comprehensive inspection at Coachmans Medical Practice on 10 January 2018. The inspection was carried out as part of our inspection programme.

At this inspection we found:

- The practice had clear systems to manage risk so that safety incidents were less likely to happen. When incidents did happen, the practice learned from them and improved their processes.
- The practice routinely reviewed the effectiveness and appropriateness of the care it provided. It ensured that care and treatment was delivered according to evidence-based guidelines.
- Staff involved and treated patients with compassion, kindness, dignity and respect.
- The practice had appropriate facilities and was well equipped to treat patients and meet their needs.
- Patients said they were able to book an appointment that suited their needs. Pre-bookable, on the day appointments, home visits and phone consultation services were available.
- The practice recognised that the patient's emotional and social needs were as important as their physical needs.
- Recruitment procedures were kept patients safe.
- Patients found the appointment system easy to use and reported that they were able to access care when they needed it.

Summary of findings

- Staff had been provided with appropriate training, supported to develop new skills and received an up to date appraisal.
- Staff were positive about working in the practice.
- Patient survey results were positive and higher than average in some areas.

Professor Steve Field (CBE FRCP FFPH FRCGP)

Chief Inspector of General Practice

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people	Good 
People with long term conditions	Good 
Families, children and young people	Good 
Working age people (including those recently retired and students)	Good 
People whose circumstances may make them vulnerable	Good 
People experiencing poor mental health (including people with dementia)	Good 

Coachmans Medical Practice

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC lead inspector and the team included a GP specialist adviser.

Background to Coachmans Medical Practice

Coachmans Medical Practice offers general medical services to patients. There are approximately 11,000 registered patients.

The practice is run by six partners which include four GPs (three male and one female), the practice manager and the practice nurse manager. The practice is also supported by three salaried GPs (one male and two female), three practice nurses (female), three healthcare assistants, a team of receptionists and administrative staff, a deputy practice manager, an IT manager, a building services manager.

The practice population has a significantly lower number of patients between 55-85 years of age than the England and

local clinical commissioning group (CCG) averages, with a significantly lower than average number of patients aged over 65 years of age. The number of patients aged 0-9 and 15-39 years of age were above average. There are fewer than average patients with a long standing health conditions and the percentage of registered patients suffering deprivation (affecting both adults and children) is slightly higher than the average for England.

Services are provided from the location:

Lansbury Road

Broadfield

Crawley

West Sussex

RH11 9JA

There are arrangements for patients to access care from an Out of Hours provider through NHS 111.

The practice runs a number of services for its patients including asthma clinics, child immunisation clinics, diabetes clinics, new patient checks and holiday vaccinations and advice. Further information on the practice and services provided can be found on their website, www.coachmansmedicalpractice.co.uk

Are services safe?

Our findings

We rated the practice, and all of the population groups, as good for providing safe services.

Safety systems and processes

The practice systems to keep patients safe and safeguarded from abuse.

- The practice conducted safety risk assessments and had a suite of safety policies which were regularly reviewed and communicated to staff. Staff received some safety information for the practice as part of their induction and refresher training.
- Policies were regularly reviewed and were accessible to all staff. Staff understood who they should go to for further guidance.
- The practice worked with other agencies to support patients and protect them from neglect and abuse. Staff took steps to protect patients from abuse, neglect, harassment, discrimination and breaches of their dignity and respect.
- The practice carried out staff checks, including checks of professional registration where relevant, on recruitment and on an ongoing basis. Disclosure and Barring Service (DBS) checks were undertaken where required. (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable). The recruitment records we saw contained photographic identity, written references and curriculum vitae.
- All staff who acted as chaperones were trained for the role.
- There was an effective system to manage infection prevention and control and the practice had undertaken a recent audit with all actions completed.
- The practice ensured that facilities and equipment were safe and that equipment was maintained according to manufacturers' instructions. There were systems for safely managing healthcare waste.

Risks to patients

There were systems to assess, monitor and manage risks to patient safety.

- There were arrangements for planning and monitoring the number and mix of staff needed.

- There was an effective induction system for temporary staff tailored to their role.
- Staff understood their responsibilities to manage emergencies on the premises and to recognise those in need of urgent medical attention. Clinicians knew how to identify and manage patients with severe infections, for example, sepsis.
- When there were changes to services or staff the practice assessed and monitored the impact on safety.

Information to deliver safe care and treatment

Staff had the information they needed to deliver safe care and treatment to patients.

- Individual care records were written and managed in a way that kept patients safe. The care records we saw showed that information needed to deliver safe care and treatment was available to relevant staff in an accessible way.
- The practice had systems for sharing information with staff and other agencies to enable them to deliver safe care and treatment.
- Referral letters included all of the necessary information.

Safe and appropriate use of medicines

The practice had reliable systems for appropriate and safe handling of medicines.

- The systems for managing medicines, including vaccines, medical gases, and emergency medicines and equipment minimised risks. The practice kept prescription stationery securely and there was a system to track and monitor use.
- Staff prescribed, administered or supplied medicines to patients and gave advice on medicines in line with legal requirements and current national guidance. The practice had audited antimicrobial prescribing as part of a local scheme which measured the quality, safety and cost effectiveness of antimicrobial prescribing. The practice took part in quarterly reviews with the CCG medicines optimisation team.
- Patients' health was monitored to ensure medicines were being used safely and followed up on appropriately. The practice involved patients in regular reviews of their medicines.

Track record on safety

The practice had a good safety record.

Are services safe?

- There were comprehensive risk assessments in relation to safety issues.
- The practice monitored and reviewed activity. This helped it to understand risks and gave a clear, accurate and current picture that led to safety improvements.

Lessons learned and improvements made

The practice learned and made improvements when things went wrong.

- There was a system for recording and acting on significant events and incidents. Staff understood their duty to raise concerns and report incidents and near misses. Leaders and managers supported them when they did so. The practice also recognised good practice as a significant event and shared these events with the team. For example; we saw a recent documented event when staff took prompt action to recognise a serious health risk for a patient and refer them for treatment.
- There were adequate systems for reviewing and investigating when things went wrong. The practice learned and shared lessons, identified themes and took action to improve safety in the practice. For example, when a concern was raised by one of the GPs about responses to faxed documents the practice reviewed their systems and introduced a new approach to manage urgent information requests and record keeping.
- There was a system for receiving and acting on safety alerts. The practice learned from external safety events as well as patient and medicine safety alerts.

Are services effective?

(for example, treatment is effective)

Our findings

We rated the practice, and all of the population groups, as good for providing an effective service.

Effective needs assessment, care and treatment

The practice had systems to keep clinicians up to date with current evidence-based practice. We saw that clinicians assessed needs and delivered care and treatment in line with current legislation, standards and guidance supported by clear clinical pathways and protocols.

- Patients' needs were fully assessed. This included their clinical needs and their mental and physical wellbeing.
- The practice was an outlier for the percentage of a specific antibiotic group prescribed that at 11% compared to the clinical commissioning group (CCG) average of 7% and the national average of 5%. The practice was aware of this and was working to reduce this area of prescribing.
- We saw no evidence of discrimination when making care and treatment decisions.

Older people:

- Older patients who are frail or may be vulnerable received a full assessment of their physical, mental and social needs. Those identified as being frail had a clinical review including a review of medication.
- Patients aged over 75 were invited for a health check. If necessary they were referred to other services such as voluntary services and supported by an appropriate care plan.
- The practice followed up on older patients discharged from hospital. It ensured that their care plans and prescriptions were updated to reflect any extra or changed needs.

People with long-term conditions:

- For patients with the most complex needs, the GP worked with other health and care professionals to deliver a coordinated package of care.
- Staff who were responsible for reviews of patients with long term conditions had received specific training.
- The practice was comparable to local and national data relating to long-term conditions. For example, the percentage of patients with diabetes, on the register, whose last measured total cholesterol (measured within the preceding 12 months) is 5 mmol/l or less was 77%

compared to the CCG average 83% and the national average of 80%; the percentage of patients with chronic obstructive pulmonary disease (COPD) who had a review undertaken

including an assessment of breathlessness in the preceding 12 months was 92% compared to the CCG average of 93% and the national average of 90%; and the percentage of patients with asthma, on the register, who have had an asthma review in the preceding 12 months that includes an assessment of asthma control was 69% compared to the CCG average of 79% and the national average of 76%.

Families, children and young people:

- Childhood immunisations were carried out in line with the national childhood vaccination programme. The data available to CQC at the time of the inspection indicated that the uptake rates for the vaccines given were in line with the target percentage of 90% or above in most areas. The practice provided the commission with updated information on the one parameter for under twos that had scored 71.5% for this time period (01/04/2016 to 31/03/2017). They were able to demonstrate that they had achieved over the 90% target for this indicator.
- The practice had arrangements to identify and review the treatment of newly pregnant women on long-term medicines.

Working age people (including those recently retired and students):

- The practice's uptake for cervical screening was 78%, which was in line with the 80% coverage target for the national screening programme.
- The practice had systems to inform eligible patients to have the meningitis vaccine, for example before attending university for the first time.
- Patients had access to appropriate health assessments and checks including NHS checks for patients aged 40 to 74. There was appropriate follow-up on the outcome of health assessments and checks where abnormalities or risk factors were identified.

People whose circumstances make them vulnerable:

Are services effective?

(for example, treatment is effective)

- End of life care was delivered in a coordinated way which took into account the needs of those whose circumstances may make them vulnerable. GPs offered discussions about end of life care with patients' families where appropriate.
- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.

People experiencing poor mental health (including people with dementia):

- 93% of patients diagnosed with dementia had their care reviewed in a face to face meeting in the previous 12 months which was in line with the CCG average of 84% and the national average of 84%.
- 91% of patients diagnosed with schizophrenia, bipolar affective disorder and other psychoses had a comprehensive, agreed care plan documented in the previous 12 months. Compared to the CCG average of 93% and the national average of 90%; and the percentage of patients experiencing poor mental health who had received discussion and advice about alcohol consumption was 94% compared to the CCG average of 93% and the national average of 91%.

Monitoring care and treatment

The practice had a comprehensive programme of quality improvement activity and routinely reviewed the effectiveness and appropriateness of the care provided. For example the practice carried out an audit of the risk of gastro-intestinal bleeding when prescribing medicines for treating depression and pain. As a result action was taken to increase the prescribing of medicine to reduce the risk of bleeding for patients on these combined medicines.

The most recent published Quality Outcome Framework (QOF) results were 97% of the total number of points available compared with the CCG average of 98% and national average of 97%. The overall exception reporting rate was 12% which was comparable to the CCG average of 11% and the national average of 10%. (QOF is a system intended to improve the quality of general practice and reward good practice. Exception reporting is the removal of patients from QOF calculations where, for example, the patients decline or do not respond to invitations to attend a review of their condition or when a medicine is not appropriate.)

Effective staffing

Staff had the skills, knowledge and experience to carry out their roles. For example, staff whose role included immunisation and taking samples for the cervical screening programme had received specific training and could demonstrate how they stayed up to date.

- The practice understood the learning needs of staff and provided protected time and training to meet them. Up to date records of skills, qualifications and training were maintained.
- Staff were encouraged and given opportunities to develop.
- The practice provided staff with ongoing support. This included an induction process, one-to-one meetings, coaching and mentoring, clinical supervision and support for revalidation.
- There was a clear approach for supporting and managing staff when their performance was poor or variable.

Coordinating care and treatment

Staff worked together and with other health and social care professionals to deliver effective care and treatment.

- We saw records that showed that all appropriate staff, including those in different teams, services and organisations, were involved in assessing, planning and delivering care and treatment.
- Patients received coordinated and person-centred care. This included when they moved between services, when they were referred, or after they were discharged from hospital. The practice worked with patients to develop personal care plans that were shared with relevant agencies.
- The practice ensured that end of life care was delivered in a coordinated way which took into account the needs of different patients, including those who may be vulnerable because of their circumstances. The practice had systems in place to inform staff of the needs of patients receiving end of life care.

Helping patients to live healthier lives

Staff were consistent and proactive in helping patients to live healthier lives.

Are services effective?

(for example, treatment is effective)

- The practice identified patients who may be in need of extra support and directed them to relevant services. This included patients in the last 12 months of their lives, patients at risk of developing a long-term condition and carers.
- Staff encouraged and supported patients to be involved in monitoring and managing their health.
- Staff discussed changes to care or treatment with patients and their carers as necessary.
- The practice supported national priorities and initiatives to improve the population's health, for example, stop smoking campaigns, tackling obesity.

Consent to care and treatment

The practice obtained consent to care and treatment in line with legislation and guidance.

- Clinicians understood the requirements of legislation and guidance when considering consent and decision making.
- Clinicians supported patients to make decisions. Where appropriate, they assessed and recorded a patient's mental capacity to make a decision.
- The practice monitored the process for seeking consent appropriately.

Are services caring?

Our findings

We rated the practice and all of its population groups as good for providing caring services.

Kindness, respect and compassion

Staff treated patients with kindness, respect and compassion.

- Staff understood patients' personal, cultural, social and religious needs.
- The practice gave patients timely support and information.
- Reception staff knew that if patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.
- All of the 22 patient Care Quality Commission comment cards and additional four items of written feedback we received were positive about the service experienced. Patients told us they found the doctors, nurses and administration staff to be kind, supportive, understanding and considerate. One person commented that they sometimes had to wait for a long time to be seen when they arrived for their appointment. We also spoke with seven patients either face to face or on the telephone. Feedback from these patients was in line with the comment card responses, patients told us their experiences of the practice was positive and they felt cared for by supportive and professional staff. These results were in line with the results of the NHS Friends and Family Test and other feedback received by the practice.

Results from the July 2017 annual national GP patient survey showed patients felt they were treated with compassion, dignity and respect. Of the 376 surveys which were sent out, 113 were returned. This represented about 1.3% of the practice population. The practice was in line with local and national averages for its satisfaction scores on consultations with GPs and nurses. For example:

- 88% of patients who responded said the GP was good at listening to them compared with the clinical commissioning group (CCG) average of 85% and the national average of 89%.
- 89% of patients who responded said the GP gave them enough time comparable to the CCG average of 80% and the national average of 86%.

- 94% of patients who responded said they had confidence and trust in the last GP they saw comparable to the CCG average of 93% and the national average of 96%.
- 81% of patients who responded said the last GP they spoke to was good at treating them with care and concern comparable to the CCG average of 78% and the national average of 86%.
- 93% of patients who responded said the nurse was good at listening to them comparable to the CCG average of 90% and the national average of 91%.
- 95% of patients who responded said the nurse gave them enough time comparable to the CCG average of 90% and the national average of 92%.
- 100% of patients who responded said they had confidence and trust in the last nurse they saw comparable to the CCG average of 97% and the national average of 97%.
- 94% of patients who responded said the last nurse they spoke to was good at treating them with care and concern; CCG average of 89% and the national average of 91%.
- 91% of patients who responded said they found the receptionists at the practice helpful comparable to the CCG of 81% and the national average of 87%.

Involvement in decisions about care and treatment

Staff helped patients be involved in decisions about their care and were aware of the Accessible Information Standard (a requirement to make sure that patients and their carers can access and understand the information they are given):

- Interpretation services were available for patients who did not have English as a first language. We saw notices in the reception areas, including in languages other than English, informing patients this service was available. Patients were also told about multi-lingual staff who might be able to support them.
- Staff communicated with patients in a way that they could understand, for example, communication aids and easy read materials were available.
- Staff helped patients and their carers find further information and access community and advocacy services. They helped them ask questions about their care and treatment.

Are services caring?

The practice identified patients who were carers when registering patients and opportunistically during consultations. The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 105 patients as carers (approximately 1% of the practice list).

- The practice had a care services coordinator to assist with identifying carers. Details about the support services for carers were available from reception.
- Staff told us that if families had experienced bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were in line with local and national averages:

- 83% of patients who responded said the last GP they saw was good at explaining tests and treatments compared with the clinical commissioning group (CCG) average of 84% and the national average of 86%.

- 82% of patients who responded said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 75% and the national average of 82%.
- 90% of patients who responded said the last nurse they saw was good at explaining tests and treatments compared to the CCG average of 89% and the national average of 90%.
- 90% of patients who responded said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 84% and the national average of 85%.

Privacy and dignity

The practice respected and promoted patients' privacy and dignity.

- Staff recognised the importance of patients' dignity and respect.
- The practice complied with the Data Protection Act 1998.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

We rated the practice and all its population groups as good for providing responsive services

Responding to and meeting people's needs

The practice organised and delivered services to meet patients' needs. It took account of patient needs and preferences.

- The practice understood the needs of its population and tailored services in response to those needs. For example online services such as repeat prescription requests, advanced booking of appointments, advice services for common ailments. The practice improved services where possible in response to unmet needs.
- The practice ran a triage system with a duty doctor each day where 'on the day' appointments were offered. They reported that the current system met the demand for appointments from patients.
- The facilities and premises were appropriate for the services delivered.
- The practice made reasonable adjustments when patients found it hard to access services. For example, children requiring emergency appointments were able to attend after school hours and patients who were unable to attend the surgery were encouraged to use the phone appointments system when appropriate.
- Care and treatment for patients with multiple long-term conditions and patients approaching the end of life was coordinated with other services.

Older people:

- All patients had a named GP who supported them in whatever setting they lived, whether it was at home or in a care home or supported living scheme.
- The practice was responsive to the needs of older patients, and offered home visits and urgent appointments for older people and housebound patients.
- Older people were encouraged to make use of phone consultations and were able to access on the day appointments with their own GP.

People with long-term conditions:

- Patients with a long-term condition received an annual review to check their health and medicines needs were being appropriately met. Multiple conditions were reviewed at one appointment, and consultation times were flexible to meet each patient's specific needs.
- The practice held regular meetings with the local district nursing team to discuss and manage the needs of patients with complex medical issues.

Families, children and young people:

- We found there were systems to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of accident and emergency (A and E) attendances. Records we looked at confirmed this.
- All parents or guardians calling with concerns about a child under the age of 18 were offered a same day appointment when necessary.
- GPs and nurses were available to give advice on contraception and provide sexual health screening or signpost to appropriate local services.

Working age people (including those recently retired and students):

- The needs of this population group had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- Phone GP consultations were available which supported patients who were unable to attend the practice during normal working hours.
- An onsite smoking cessation service was available.

People whose circumstances make them vulnerable:

- The practice held a register of patients living in vulnerable circumstances including homeless people, travellers and those with a learning disability.
- The practice had linked into local initiatives to support patients who are on the autism spectrum. They recently had an open event for patients and their families that was well attended.

People experiencing poor mental health (including people with dementia):

- Staff interviewed had a good understanding of how to support patients with mental health needs and those patients living with dementia.

Are services responsive to people's needs?

(for example, to feedback?)

- The practice had worked proactively with the local mental health team and children's and adolescence mental health team (CAMHS). This included working with the local secondary care services, local authority and police to support patients who were disadvantaged and isolated.

Timely access to the service

Patients were able to access care and treatment from the practice within an acceptable timescale for their needs.

- Patients had timely access to initial assessment, test results, diagnosis and treatment.
- Waiting times, delays and cancellations were minimal and managed appropriately.
- Patients with the most urgent needs had their care and treatment prioritised.
- The appointment system was easy to use.

Results from the July 2017 annual national GP patient survey showed that patients' satisfaction with how they could access care and treatment was comparable to local and national averages. This was supported by observations on the day of inspection and completed comment cards. Of the 376 surveys which were sent out, 113 were returned. This represented about 1.3% of the practice population. The results were better than local and national averages.

- 77% of patients who responded were satisfied with the practice's opening hours compared with the clinical commissioning group (CCG) average of 73% and the national average of 80%.
- 71% of patients who responded said they could get through easily to the practice by phone; compared to the CCG of 57% and the national average of 71%.
- 74% of patients who responded said that the last time they wanted to speak to a GP or nurse they were able to get an appointment; compared to the CCG of 67% and the national average of 76%.

- 88% of patients who responded said their last appointment was convenient; compared to the CCG of 75% and the national average of 81%.
- 80% of patients who responded described their experience of making an appointment as good; compared to the CCG of 60% and the national average of 73%.
- 53% of patients who responded said they don't normally have to wait too long to be seen; compared to the CCG of 54% and the national average of 58%.

Listening and learning from concerns and complaints

The practice took complaints and concerns seriously and responded to them appropriately to improve the quality of care.

- Information about how to make a complaint or raise concerns was available and it was easy to do. Staff treated patients who made complaints compassionately.
- The complaint policy and procedures were in line with recognised guidance. Ten complaints were received in the last year, which we reviewed and found that they were satisfactorily handled in a timely way. Three of these were for secondary care services and were forwarded to the appropriate service once acknowledged.
- The practice learned lessons from individual concerns and complaints and also from analysis of trends. It acted as a result to improve the quality of care. For example, following a prescribing error the practice worked with the patient to resolve the issue and the concerns were discussed with the staff team to reduce the risk of a reoccurrence.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

We rated the practice and all population groups as good for providing well-led services.

Leadership capacity and capability

Leaders had the capacity and skills to deliver high-quality, sustainable care.

- Leaders had the experience, capacity and skills to deliver the practice strategy and address risks to it.
- They were knowledgeable about issues and priorities relating to the quality and future of services. They understood the challenges and were addressing them.
- Leaders at all levels were visible and approachable. They worked closely with staff and others to make sure they prioritised compassionate and inclusive leadership.
- The practice had effective processes to develop leadership capacity and skills, including planning for the future leadership of the practice.

Vision and strategy

The practice had a clear vision and credible strategy to deliver high quality care and promote good outcomes for patients.

- There was a clear vision and set of values. The practice had a realistic strategy and supporting business plans to achieve priorities.
- The practice developed its vision, values and strategy jointly with patients, staff and external partners.
- Staff were aware of and understood the vision, values and strategy and their role in achieving them.
- The strategy was in line with health and social priorities across the region. The practice planned its services to meet the needs of the practice population.
- The practice monitored progress against delivery of the strategy.

Culture

The practice had a culture of high-quality sustainable care.

- Staff stated they felt respected, supported and valued. They were proud to work in the practice. A number of staff told us they had worked at the practice for many years and felt they knew the patients well which meant they could manage patient expectations.
- The practice focused on the needs of patients.

- Leaders and managers acted on behaviour and performance inconsistent with the vision and values.
- Openness, honesty and transparency were demonstrated when responding to incidents and complaints. The provider was aware of and had systems to ensure compliance with the requirements of the duty of candour.
- Staff we spoke with told us they were able to raise concerns and were encouraged to do so. They had confidence that these would be addressed. We were told that there was an open and honest culture within the practice.
- There were processes for providing all staff with the development they need. This included appraisal and career development conversations. Staff were supported to meet the requirements of professional revalidation where necessary.
- Clinical staff, including nurses, were considered valued members of the practice team. The partnership included the lead nurse and the practice manager. All clinical staff were given protected time for professional development and evaluation of their clinical work.
- There was a strong emphasis on the safety and well-being of all staff.
- There were positive relationships between staff and teams.

Governance arrangements

There were clear responsibilities, roles and systems of accountability to support good governance and management.

- Structures, processes and systems to support good governance and management were clearly set out, understood and effective. The governance and management of partnerships, joint working arrangements and shared services promoted interactive and co-ordinated person-centred care.
- Staff were clear on their roles and accountabilities including in respect of safeguarding and infection prevention and control
- Practice leaders had established proper policies, procedures and activities to ensure safety and assured themselves that they were operating as intended.

Managing risks, issues and performance

There were clear and effective processes for managing risks, issues and performance.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

- There was an effective, process to identify, understand, monitor and address current and future risks including risks to patient safety.
- The practice had processes to manage current and future performance. Performance of employed clinical staff could be demonstrated through audit of their consultations, prescribing and referral decisions. Practice leaders had oversight of MHRA alerts, incidents, and complaints.
- Clinical audit had a positive impact on quality of care and outcomes for patients. There was clear evidence of action to change practice to improve quality.
- The practice had plans in place and had trained staff for major incidents.
- The practice implemented service developments and where efficiency changes were made this was with input from clinicians to understand their impact on the quality of care.

Appropriate and accurate information

The practice acted on appropriate and accurate information.

- Quality and operational information was used to ensure and improve performance. Performance information was combined with the views of patients.
- Quality and sustainability were discussed in relevant meetings where all staff had sufficient access to information.
- The practice used performance information which was reported and monitored and management and staff were held to account.
- The information used to monitor performance and the delivery of quality care was accurate and useful. There were plans to address any identified weaknesses.
- The practice used information technology systems to monitor and improve the quality of care.
- The practice submitted data or notifications to external organisations as required.
- There were robust arrangements in line with data security standards for the availability, integrity and confidentiality of patient identifiable data, records and data management systems.

Engagement with patients, the public, staff and external partners

The practice involved patients, the public, staff and external partners to support high-quality sustainable services.

- A full and diverse range of patients', staff and external partners' views and concerns were encouraged, heard and acted on to shape services and culture. For example, the practice had conducted a quality improvement project involving reviews of GP performance and feedback from all staff on areas such as approachability, communication skills and effectiveness. This information was shared with all staff and used to inform future plans for the practice.
- There was a virtual patient participation group (PPG) which was active and had 159 members. We met with the link member for the clinical commissioning group (CCG) PPG meetings. The members had been involved consultations about improvements to the telephone system, the patient triage system and availability of appointments with GPs. All of these areas have been implemented. We were told that the practice was recruiting patients to form a new PPG and planned to have quarterly face to face meetings.
- The service was transparent, collaborative and open with stakeholders about performance.

Continuous improvement and innovation

There were systems and processes for learning, continuous improvement and innovation.

- There was a focus on continuous learning and improvement at all levels within the practice.
- Staff knew about improvement methods and had the skills to use them.
- The practice made use of internal and external reviews of incidents and complaints. Learning was shared and used to make improvements.
- Leaders and managers encouraged staff to take time out to review individual and team objectives, processes and performance.
